2022 UIL Computer Applications Invitational Test A

General test instructions: Follow instructions to create printouts for this contest. When time is called, printouts will be graded. Calibri 12-point font must be used for Excel and Word documents, but Access default font sizes are acceptable for database reports.

I. SPREADSHEET

MAXIMUM 125

A. Create a spreadsheet with the following information.

B. In Cell B4, divide Cell B2 by Cell B3 using absolute reference for Cell B2.

C. In Cell B5, divide Cell B4 by 2.

D. In Cell B6, divide Cell B5 by 2.

E. Select Cells B4 thru B6 and fill right thru Cells G4 thru G6.

F. Create a printout in landscape orientation using Calibri 12-point font, 1" margins and the following specifications.

1. Center the worksheet horizontally and vertically on the page.
2. Insert the following header in the upper right-hand corner 1" from the top of the page and aligned on the right margin, replacing 99999 with your contestant number: (99999)-InvA-1
3. Show gridlines and row and column indicators.
4. Merge Cells A1 thru G1 and center data.
5. Make everything in Column A and Row 1 boldface type.
6. Left justify Cells A2 thru A6 and center everything else in Cells B2 thru G6.
7. Value in Cell B2 should be a number with no commas and 1 decimal.
8. All values in Row 3 should be numbers with no decimals, and all values in Cells B4 thru G6 should be numbers with commas and 3 decimals.
9. Set the print area to be Cell A1 thru G6.

G. Save the spreadsheet as a file called **InvA-1** and print it in landscape orientation on one page.

II. SPREADSHEET CHART

A. Select Cells A4 thru G6 and insert a 2D clustered column chart with the following specifications to be used in the document in **Part III**.

1. Use the title as shown centered above chart in boldface type.
2. Right click on the chart and click Select Data and edit the Horizontal (Category) Axis Labels to be Cells B3 thru G3 and format as numbers with no decimals
3. Use **Wavelength**, **1/2 Wavelength**, and **1/4 Wavelength** for the legend labels.
4. Format **Wavelength** as black columns, format **1/2 Wavelength** as solid white columns with black borders and format **1/4 Wavelength** as grey columns with black borders.

5. Click on the y-axis labels and set minimum to be 0, maximum to 12, and major interval to 3 and format as numbers with no decimals.
6. Use a black border around the chart area.

B. The chart should have the appearance above.

	A	B	C	D	E	F	G
1	SOUND						
2	Speed	1072.5	Ft./Sec.				
3	Frequency	100	200	300	400	500	600
4	Wavelength						
5	1/2 Wavelength						
6	1/4 Wavelength						

- C. Copy the chart to be pasted into the document in **Part III**.
- D. Print the chart if you are running out of time to receive some credit for your work.

III. DOCUMENT WITH CHART

MAXIMUM 125

- A. Create a simplified letter blocked for a window envelope with standard margins and Calibri 12-point font with the following specifications.
 - 1. Use the following header right justified on the right-hand margin 1" from the top of the page, replacing 99999 with your contestant number: (99999)-InvA-2
 - 2. Use today's date.
 - 3. Use the following inside address, with appropriate capitalization and punctuation for a window envelope: Ms. Gail Force, Project Developer, 422 Jackson Dr, Dallas, TX 75126
 - 4. Use the following subject in appropriate capitalization and positioning:
TELEPHONE SATELLITE PROJECT
 - 5. Use the following paragraphs for the body.

Below is a chart of the wavelengths for sound per Mr. Gibson's calculations. He used the speed of sound as 1072.5 feet per second with frequency distributions from 100 to 600 in increments of 100.

[Paste the chart from Part II here, leaving one blank line before and after the chart.
Indent at least ½" and center between the left and right margins.
Be sure nothing is truncated or wrapped and everything is easily readable.]

Use the data in the above chart for calculations on the current project analyzing data for telephone satellite projections.

- B. Use the following sender's name in appropriate capitalization and positioning: Nell Anvoid
- C. Use the following reference initials: uil
- D. Save the document as a file called **InvA-2** and print in portrait orientation on one page.

	A	B	C	D	E	F	G
1	SOUND						
2	Speed	1072.5	Ft./Sec.				
3	Frequency	100	200	300	400	500	600
4	Wavelength	10.725	5.363	3.575	2.681	2.145	1.788
5	1/2 Wavelength	5.363	2.681	1.788	1.341	1.073	0.894
6	1/4 Wavelength	2.681	1.341	0.894	0.670	0.536	0.447

Computer Applications Invitational Test A – Tiebreaker - Score Sheet

GENERAL INSTRUCTIONS: All contestants take the Tiebreaker component of the test, but it is only to be scored if a tie occurs in the top six places.

I. CALCULATE GROSS WORDS PER MINUTE:

- A. Circle all errors on the tied contestants' papers.
- B. Determine the gross words per minute.
 1. Find the number of words typed to the right of the last complete line typed by contestant.
 2. Add the number of words in the last line if it is incomplete to the tally.
 3. Divide the number by five to get the gross words per minute.
 4. For example, if a contestant typed twenty lines plus seven words on the next line, add the number out to the right of the completed line plus seven.
 5. Divide by five to get gross words per minute.

II. DETERMINE THE GROSS WORDS PER MINUTE

III. DEDUCT ONE POINT FOR EACH ERROR

IV. ✓ TOTAL - GROSS WPM TYPED LESS ERRORS

V. ADD FIVE BONUS POINT FOR EACH SUCCESS

FORMAT	Top margin 1 ½"			
	Left margin 1"			
	Right margin 1"			
	Bottom margin at least 1 - 1 ½"			
TITLE	Title in boldface type			
	Title centered			
	3 blank lines between title and body			
BODY	Body of report single spaced			
	Everything in Calibri 12-point type			
	Paragraphs not indented			
	Double spaced between paragraphs			
¶ 2	Macron shown on <i>e</i> of <i>Hēt</i>			
	Add five points each correct Greek letter in <i>ηγα</i> , which appears twice in the paragraph max 30			
¶ 3	Greek letter η shown			
✓	TOTAL - BONUS POINTS			
✓	GRAND TOTAL-WPM PLUS BONUS POINTS			
✓	GRADERS' INITIALS			

AITCH

The eighth symbol in the Phoenician alphabet is the letter aitch, <i>H</i> . It has altered less in the course of ages than most alphabetic symbols. From the beginning of Phoenician records, it has consisted of two uprights connected by transverse bars, at first either two or three in number. The uprights are rarely perpendicular and the crossbars are not so precisely arranged as they are in early Greek and Latin inscriptions which show the letter as two rectangles out of which the ordinary <i>H</i> develops by the omission of the crossbars at top and bottom. It is very exceptional for this letter to have more than three crossbars, though as many as five are occasionally found in northern Greece. Within the same inscription, the appearance of the letter often varies considerably as regards the space between and the length of the uprights. When only one bar is found it regularly crosses the uprights about the middle. In a few cases the rectangle is closed at top and bottom but has no middle crossbar, appearing as a box.	19 33 50 65 82 99 115 128 143 161 179
The Phoenician name for the letter was <i>Heth</i> (<i>Hêt</i>). According to Semitic scholars, it had two values. It could have the sound of a glottal spirant, which is a very strong aitch sound, or it could have an unvoiced velar spirant like the German <i>ch</i> in <i>ach</i> . The Greeks borrowed it with the value of the ordinary aspirate and with the name <i>ηγα</i> . Very early in their history, however, most of the Greeks of Asia Minor lost the aspirate altogether. Then, having then no further use for the symbol with this value, they adopted it to represent the long <i>e</i> -sound, which was not originally distinguished by a different symbol from the short sound. With this value, its name has always been <i>ηγα</i> in Greek. The alphabet of the Asiatic Greeks was gradually adopted elsewhere.	195 214 230 248 264 282 297 312 313
In official documents at Athens, <i>H</i> represented the rough breathing or aspirate till 403 BCE; henceforth, it was used for <i>η</i> . The western Greeks, from whom the Romans obtained their alphabet, retained their aspirate longer than those of Asia Minor, and hence the symbol came to the Romans with the value not of a long vowel but of the aspirate, which it still preserves. The Greek aspirate was itself the first or left-hand half of this letter, while the smooth breathing was the right-hand portion of the letter.	328 343 359 379 396 402
In English, the history of the letter aitch is very similar to that in Latin. While the parts above the glottis are in position to produce a vowel, an aspirate is produced without vibration of the vocal chords. Though <i>h</i> survives in Scotland, Ireland, and America as well as in the speech of cultivated persons, the sound in most of the vulgar dialects is entirely lost. Where it is not ordinarily lost, it disappears in unaccented syllables.	422 439 455 472 479
